## (54) IMAGE RECORDER AND IMAGE REPRODUCER

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide an image recorder and an image reproducer which record and reproduce a high-definition image without deteriorating its quality, and have recording systems providing records reproducible even by an image reproducer having only a conventional low-resolution decoder.

**SOLUTION:** The image recorder has a means 104 for converting inputted high-definition image signals into a plurality of low-resolution image signals by dividing the inputted signals, a means 105 for coding the plurality of image signals, and a means 107 for recording coded image data on a recording medium, thereby recording them as low-resolution image data. Thus the data are reproducible even by a low-resolution image reproducer.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
